INFRARED RECEIVER MODULE

● Description

The HRM-5042AH38-TRZ is miniaturized infrared receivers for remote control and other applications requiring improved ambient light rejection.

The separate PIN diode and preamplifier IC are assembled on a single lead frame.

The epoxy package contains a special IR filter.

This module has excellent performance even in disturbed ambient light applications and provides protection against uncontrolled output pulses.

● Features

- Supply voltage range: 2.7V ~ 5.5 V
- TTL and CMOS compatibility
- No external components except PIN diode
- Available for carrier frequencies between 32.7kHz to 40kHz,(Adjusted by zener-diode fusing, 32.7kHz,36.7kHz,37.9kHz,40kHz)
- Internal filter for PCM frequency
- Enhanced immunity against all kinds of disturbance light and power noise (Built-in Filter & AGC Circuit)
- No occurrence of disturbance pulses at output pin within nominal conditions.
- Open collector output & Output active low (Built-in Pull-up resistor 50 kΩ)
- The output pulse width is very stable (Optimized for a narrow margin of the decoding)

● Applications:

1. Optical switch
2. Light detecting portion of remote control
 - AV instruments such as Audio,TV,VCR,CD,MD,DVD,etc.
 - Home appliances such as Air-conditioner,Fan,etc.
 - CATV set top boxes
 - Multi-media Equipment

● Cautions

- store and use where there is no force causing transformation or change in quality
- store and use where there is no extreme humidity
- in order to prevent damage from static electricity make sure that the human body and the Soldering iron are connected to ground before using
- the ripple noise from power supply lines may shorten detecting distance of IT receiver module Thus in order to ensure more reliable operating please add RC filter ($R=100$ $C=47$) between Vcc and GND
- when a disturbance signal is applied to the series it can still receive the data signal However the sensitivity is reduced to the level that no unexpected pulses will occur Some examples of such disturbance signals which can be suppressed pulses by the series
 - A DC light(ex from tungsten lamp or sunlight)
 - B Continuous signal at center frequency or any other frequency
 - C Signals from fluorescent lamps with electronic ballast with high or low modulation

● Suitable Data format

| Item | Symbol | Time |
|---------------------------------------|------------|------------|
| Minimum burst length | tBurst | 350us |
| Minimum gap time after each burst | tGap | 350us |
| Minimum pause time in the data stream | tPause_min | Min. 25 ms |

tPause_min Could be changed by different data word format. Therefore, for new application on sets please refer to "Required data pause time(tPause)" on above.

● Reliability Test Items

| Parameter | Test conditions | Remark |
|---------------------------|--|--------|

● Use matters needing attention

- store and use where there is no force causing transformation or change in quality
- store and use where there is no extreme humidity
- in order to prevent damage from static electricity make sure that the human body and the Soldering iron are connected to ground before using
- Please from the bottom of the resin for welding for more than 2 mm
- Dip soldering: please below 260 degrees, 5 seconds to complete welding
- Soldering iron: please below 350 degrees, 3 seconds to complete welding
- Please avoid correct position after welding
- When welding in the lead frame please don't put pressure on the heated condition
- When the circuit board is installed, the mounting hole distance is consistent With the lead frame
